

RepairMonitor

Collecting data with the RepairMonitor

The registration form in the Repair Café starter kit is completely tailored to collecting repair data via the RepairMonitor. This is not only useful for your own Repair Café, but also for the global repair movement as a whole.

All data entered in the RepairMonitor is stored in one central database. This is constantly analyzed by Repair Café International and partners. This provides important insights such as:

- Which products do you find most often in the Repair Café?
- What is needed to repair these products?
- Why do some repairs succeed and do others fail?
- Which brands are generally easy to repair?
- And: which brands should you not buy?

Repair Café International uses these insights in its contacts with manufacturers, politicians and consumers. We argue for better designed products, better regulation and more careful use. Our goal is that we can use products for longer and repair them better.

Do you want to contribute to this with your Repair Café?

Go to Repairmonitor.org/en and sign your Repair Café up!

Good luck!
